

PRO11-VAQ E connection

- 1 The PRO11-VAQ E consists of two connected tanks: the PRO7-VAQ and the PRO7-VAQ E.

- The tanks are connected using the included coupling with the accompanying fibre washers.

Follow the instructions in the PRO7-VAQ E installation guide for the entire installation process.

NOTE: The PRO7-VAQ is connected to the inlet combination and the PRO7-VAQ E is connected to the Nordic boiling-water tap or the Fusion's boiling water hose. The reservoirs have an electrical capacity of 3000 W and are therefore connected to a separate group.
